INDUSTRY PROFILES 2005

824–155 Carlton St.
Winnipeg, Manitoba
R3C 3H8

- **Manitoba's Industrial Real GDP at basic prices is projected to increase 2.9% in 2005** somewhat higher than the 2.5% growth recorded in 2004. Growth in the Manitoba economy was spread over the goods and services sectors with the notable exception of agriculture. Activity in the mainly goods producing sector was strong in 2005 as production of key primary products, particularly metal fabricated products and utilities, increased dramatically.

- **Manitoba's Real GDP at basic prices is projected to reach a level of $33.6 billion in 2005. Last year, the economy employed 580,300 workers, earning on average $17.17 an hour and working an average of 33.4 hours per week.**

- **The manufacturing sector, which accounts for 12.8% of industrial production in the province, slowed to 3.4% real growth in 2005**. The sector established a record level of real GDP by hitting $4.3 billion. Leading industries in the manufacturing sector were producers of electrical equipment and fabricated metal. Both these industries reported exceptional growth in manufacturing shipments in 2005, at 13.1% and 15.9% respectively. Corresponding to an increase in manufacturing activity, **manufacturing exports will increase by 3.6% in 2005**. With a stronger dollar, low interest rates and robust domestic demand, **preliminary data indicates that import levels of manufacturing goods will be up 7.1%.**

- **Due to widespread flooding in rural Manitoba in 2005, real agricultural GDP output is down 18.4% with the sector's share of real GDP dropping to 3.5% from 4.5% in 2004.** Projected production numbers in 2005 showed wheat down by 35.6 %, barley production off by 48.7% and the canola crop declining by 34.7%. Both cattle and hog production increased this year by 9.0% and 1.0% respectively. The increase in livestock production was overshadowed by the dramatic decrease on the grains and oilseed side. Crop production in 2005 was easily the worst recorded in more than a dozen years.

- Agricultural trade was affected by very poor crop production in 2005, with exports dropping by 8.8%. It is anticipated that the poor crop production observed in 2005 will also have a significant impact on 2006 agricultural exports.

- **On the strength of electricity production, the utilities sector is projected to grow 17.5% in 2005 with its industrial share of real GDP rising from 2.9% to 3.3%.** The latter is more in line with results recorded in 1999 and 2000, just prior to an extended period of drought in western Canada. **This observed increase in real value added is propelled by a projected 65.1 % increase in power exports.**

- **In spite of slowly rising capital borrowing rates, growth in Manitoba's construction industry has been solid in the last three years.** During that time **Real GDP in the sector, reached almost $1.6 billion,** above the 5-year average level of $1.4 billion.

- **It is estimated that the construction sector grew by 5.5% in 2005 as levels of residential and non-residential activity were strong**. Construction of new housing units was projected to rise to 4,737 units from 4,440 in 2004. Non-residential construction was anticipated to grow by 7.3% in 2005. Among the larger projects started in 2005 were the new headquarters for Manitoba Hydro, new facilities at the Winnipeg Airport and the expansion of the Red River Floodway.

- **The Mining, Oil and Gas extraction sector grew by 3.9% in real value added terms in 2005. Economic growth came from the dramatic expansion of the services incidental to mining sub-sector.** This was fueled in a large part by a **140.0% increase in the number of oil wells drilled** in the province following the start of development of the Sinclair Field. In 2005, 285 oil wells were drilled up from 119 in 2004. **Additional strength in this sub-sector, came from record mineral exploration expenditures which rose 46.4% to $52.7 million in 2005.** This was up from $36.0 million in 2004.

- **The Oil and Gas Extraction sub-sector also grew as the volume of oil produced rose an estimated 22.0%. Combined with a price increase of 25.8%, this drove the nominal value of Manitoba oil shipments to the $300.0 million level.** Growth in the mining, oil and gas extraction sector was achieved inspite of a 3.8% year to date (November 2005) decline in nickel shipments and the closure of the New Brittainia gold mine in Lynn Lake.

- **It is estimated that information and culture real GDP will grow by 2.7% in 2005.** The sector, which includes broadcasting, motion pictures and telecommunications, has grown steadily. On the telecommunications side, there has been a continuing increase in demand for highspeed internet products such as digital TV as well as for mobile phone services. **Significant increases in the Manitoba's film tax credits in 2005 helped the motion picture industry sustain growth** in the number of movies filmed. 2005 also saw the production of "Falcon Beach", the first new TV series to be filmed locally in a number of years.

- **In 2005, the finance and insurance, real estate and rental and leasing sector is expected to grow by 2.8% on a real GDP basis.** Record levels of sales, of new and existing homes were recorded in 2005, which helped increase real GDP in the real estate sector. Strengthening commercial and residential rental markets will increase real GDP in the management of companies (property management) category. Also, strong levels of mutual fund sales helped propel the financial services sector.

- Personal spending on consumer goods and services expanded by a robust 4.2% in 2005 up significantly from 3.4% in 2004. Due to this increased consumer activity **retail trade in Manitoba is estimated to grow by 5.6% in 2005 up from 4.4 % in 2004.** In line with observed strength in the construction sector, significant sales increases were reported for hardware, home furnishings, home appliances, electronic equipment and building materials. Sales of recreational vehicles and used motor vehicle parts were particularly strong.

- **Real GDP in the wholesale trade sector grew by 9.9% in 2005.** Wholesale trade in Machinery and equipment grew by 13.0% over 2004. Another major contributor to growth was the personal and household goods category which includes clothing and home entertainment equipment.

- **Increases in this sub-sector stemmed in part from the reclassification of firms from the manufacturing to the wholesale sector.** This has occurred as companies now generate more value added from wholesale trade in imports than they do from manufacturing goods themselves. Declines in clothing manufacturing illustrate this trend. In 2005 this sub-sector recorded an estimated 27.5% decrease in real value added. A similar reclassification in 2004 contributed to an 86.6% increase in the wholesale trade of farm products. From 2003 to 2004, this category increased from $299.0 million to $557.9 million.

- **Real value added in the transportation and warehousing sector, grew by a projected 4.9% in 2005 down marginally from 5.1% in 2004.** The air, rail and truck transportation sub-sectors posted solid growth in 2005 as did warehousing and storage activity. All benefited from strong wholesale trade movements.

- For the second year in a row, Winnipeg Airport Authority reported record landings of both cargo and passengers.

- On the rail side, both CN and Canadian Pacific Railway reported strong net earnings growth during 2005 as a result of substantial increases in the volume of freight moved.

- **For 2005, total real import levels are projected to be 6.4% following the 5.1% in 2004.** A stronger Canadian dollar in 2005 contributed to increased imports of a broad range of items, including machinery and equipment, building materials and automotive parts. While imports lower GDP growth, they underscore the province's success in generating the higher incomes necessary to support the purchase of imported goods and services. As well, it is important to note that import purchases create value added in both the wholesale and retail sectors.

- **It is projected that total real exports will rise by 3.3% in 2005 following a 4.8 % increase in 2004.** The real export growth rate was affected by the wet weather conditions recorded in 2005. While hydro exports were up 65.1% in real value added terms, sharply reduced grain and oilseed production lead to an 8.8% drop in real agricultural exports. The continuing rise of the Canadian dollar has also exerted a dampening effect on export growth in goods and services.

- **According to the Labour Force Survey (LFS), Manitoba's employment grew by 0.7% or 3,700 new jobs in 2005.** The LFS indicates that the largest industrial employer in Manitoba is the health care and social assistance sector, employing 75,500 workers, followed by manufacturing sector at 68,500 workers in 2003.

- **Average hourly wages rose in Manitoba by 2.6% in 2005 to $17.17 from $16.74 in 2004.** Utility sector employees receive the highest hourly wages at $25.47, followed by public administration at $23.78 per hour.

NOTE TO USERS

This publication provides annual projections for the industrial performance of the Manitoba economy from 1999 to 2005. The 2005 projections are subject to revisions.

It should be noted that the NAICS industry groups differ from table to table, depending on how the survey information is aggregated.

This report is a supplement to "The Manitoba Economy: Projected 2005 Performance" released by Manitoba Bureau of Statistics (MBS) on December 21, 2005. This report focuses on the industrial performance of the economy while the earlier report provided information on the income and expenditure accounts.

The real GDP at Basic Prices by industry provided in this publication is based on a Laspeyres index while the income and expenditure accounts are based on a Fisher index.

MBS categorizes business enterprises into industries using the North American Industry Classification System (NAICS). **NAICS is based on a strict production-oriented framework where establishments are grouped into industries according to their similarity in the production process required to generate goods and services.** It is more useful to use a production-oriented approach to bring together establishments with common input structure and to compile data on their product outputs.

One of the drawbacks of the new system is that there is no longer an explicit distinction between goods producing industries and service producing industries.

This report includes GDP industrial exports and imports data for Manitoba. Since real GDP basic prices data for exports and imports is not available, this report provides industrial trade data on the market prices basis. This data is included to show Manitoba's external trade position. It should be noted that all exported items are not necessarily produced in the province.

MBS is the source for the information contained in Tables 1 to 6. The data source for industrial employment, average hourly wage rates and the actual hours worked (Tables 7 to 10) is Statistics Canada's **Labour Force Survey.** Tables 11 and 12 on investments are from Statistics Canada's **Public and Private Investments Survey (PPI).**
